CHEMICAL MANAGEMENT 4SUSTAINABILITY® PROTOCOL

Filati Biagioli Modesto Spa applies the Chemical Management 4sustainability® Protocol for eliminating toxic and harmful substances in production through the Zero Discharge of Hazardous Chemicals - **ZDHC MRSL**.

The Protocol implementation ensures compliance with a set of production process management requirements by the company and its supply chain aimed at eliminating toxic and harmful chemicals.

The **implementation level of 4S® Protocol** (Basic, Advanced, Excellence) is verified every year through a quantitative and qualitative assessment tool whose purpose is to check whether requirements relating the organization, process mapping, chemical inventory evaluation, production traceability, training, etc. have been applied and to which extent.

4sustainability® is the **Process Factory** brand that certifies the adoption by fashion and luxury companies of the sustainability roadmap.
